AVAILABLE
IN THREE
MODELS:

NO. 88 Eclipse
Standard
Freeze
Proff.

NO. 88-1 California
Model
with 1"x12" base

NO. 88-2 California
Model
with 4" lower stand pipe

STANDARD SPECIFICATIONS

Sampling Stations shall be _____' bury, with a 3/4" FIP inlet, and a (3/4" hose or unthreaded) nozzle. All stations shall be enclosed in a lockable, non-removable, aluminum-cast housing. When opened, the station shall require no key for operation, and the water will flow in an all-brass waterway. All working parts will also be of brass and be removable from above ground with no digging. A copper vent tube will enable each station to be pumped free of standing water to prevent freezing and to minimize bacteria growth.

FEATURES

■ Replace all interior parts without disturbing connections. Just unbolt the top cap and withdraw the inside working parts without digging.

■ 3/4" hose connection or unthreaded brass nozzle for easy flaming.

■ Standard utility bilge pump attaches to vent tube to remove water from waterway, insuring a clean sample in the future, and preventing freezing.

■ Vent tube with open/close valve.

■ Aluminum weathershield with handy interior shelving for supplies and storage.

■ Brass interior pipe isolates water flow and maintains consistency of brass interior parts, insuring maximum sample quality.

■ Galvanized riser pipe for exterior protection.

■ Brass valve body with 3/4" FIP inlet.
